ABSTRACT

Topic: DOCERE

Project Nature: Mini Project Extension

Completion Level: Completion 70 % of Mini Project

Online doctor point appointments is a smart web application, this provides a registration and login for both doctors and patients. Doctors can register by giving his necessary details like timings, fee, category etc. after successful registration the doctor can login by giving username and password. The doctor can view the booking request by patients.

The patients must be registered and login to book a doctor based on the category and the give the problem patient is facing and the location. The search results will show the list of doctors matching patients required criteria and he can select one and send a request.

The security provided is the encryption of the customer details like password, account details etc. they check integrity and confidentiality. They took to prevent unauthorized access.
